                                                                                                                                                                                                                                                                                                                                           Sequence 8458, Application Patent No. 6551795
GENERAL INFORMATION
                                                                                                                              APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND ANINO ACID SEQUENCES RELATING
TITLE OF INVENTION: ARUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1998-02-18
PRIOR PRIOR PRIOR DATE: 1998-02-18
PRIOR APPLICATION NUMBER: US 60/094,190

The method is useful for the fermentative preparation of L-amino acids, i.e. L-lysine, L-threonine and L-isoleucine, in which at least the tkt gene is amplified. L-lysine, L-threonine and L-isoleucine are useful in animal nutrition, in human medicine and in the pharmaceuticals industry. The present sequence is the gene for pyruvate oxidase, poxB, which was eliminated by mutation in a strain expressing with tkt in order to further increase yields of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to the preparation of L-amino acids of fermenting L-amino acid-producing coryneform bacteria which overexpresses a gene e.g. that for transketolase, tkt. Also

The present invention relates to a method for preparing L-amino acids by fermenting coryneform bacteria, comprising fermenting the L-amino acid producing bacteria in which at least the glucose 6-phosphate dehydrogenase (zwf) gene is amplified, and concentrating and isolating the L-amino acid produced. The L-amino acids produced are used in animal nutrition, human medicine, foodstuffs industry and the pharmaceuticals industry. The present sequence is Corynebacterium glutamicum strain

                                                                                The present sequence represents the poxB gene of Corynebacterium glutamicum. The poxB gene encodes a pyruvate oxidase enzyme. The poxB gene and the gnd gene are used to produce recombinant bacteria for use in the course of the invention. The gnd gene encodes a 6-phosphogluconate dehydrogenase enzyme. The specification describes a method for the fermentative preparation of L-amino acids, in
                                       particular L-lysine, L-threonine, and L-tryptophan. The method comprises fermenting coryneform bacteria in which at least the gnd gene is amplified and overexpressed. The L-amino acids produced are used in
                                                                                                                                                                                                                                                                                                                                                                                                                                  05-JUL-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Corynebacterium glutamicum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         10-DEC-2001

                                                                                                                                                                                especially animal nutrition. (I) is also useful as a source of probes and primers for isolation of related sequences. Cells in which the poxB gene is suppressed produce higher yields of L-amino acids. This sequence encodes the pyruvate oxidase (E.C. 1.2.2) poxB gene from Corynebacterium glutamicum ATCC13032 which is described in the invention.
                                                                                                                                                                                                                                                          This invention describes a novel polynucleotide (I) which is used for insertional mutagenesis of the poxB gene in coryneform bacteria. The poxB gene can be used for fermentative production of L-amino acids, specifically L-lysine, which is used in human medicine, foods and

                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to the fermentative production of D-pantothenic acid (I) by growing a (I)-producing coryneform bacterium in which the activity of at least the sequence poxB (ABLS8754, ABLS8756) encoding pyruvate oxidase (ABBS8755, EC 1.2.2.2) has been weakened, especially switched off. (I) is then recovered from medium or cells. (I) is a vitamin useful in human medicine, the pharmaceutical and food industries and particularly in animal nutrition. Reducing the activity of poxB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Fermentative production of D-pantothenic acid (I), useful e.g. in animal nutrition, from coryneform bacteria with reduced activity pyruvate oxidase gene
                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 3248 BP; 744 A; 743 C; 985 G; 776 T; 0 other;

expression profile or pattern of a gene and identifying homologous gene

Disclosure; SEQ ID NO: 7068; 246pp + Sequence Listing; English.

from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived analysing the general pattern of a gene derived analysing the general pattern of a gene derived analysing the gener The present invention provides a number of nucleotide and protein

The C. glutamicum SMP gene can be used in vectors CC (II) for expression in host cells and production or modulation of CC production of fine chemicals, such as, an organic acid, a proteinogenic CC or nonproteinogenic amino acid (preferred), a purine or pyrimidine base, an ucleoside, a nucleotide, a lipid, a saturated or unsaturated fatty CC acid, a diol, a carbohydrate, an aromatic compound, a vitamin, a CC cofactor, a polyketide, or an enzyme. The presence of (I) or SMP proteins CC (III) encoded by them are used for diagnosing the presence or activity of CC containing them are used to map genomes of organisms related to containing them are used to map genomes of organisms related to in evolutionary studies, in determining SMP protein regions required for function, in modulating SMP protein activity, in modulating the metabolism of sugars, and in modulating high-energy molecule production in a supple containing the supersection are supersection.

sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  16-DEC-1999; 99JP-0377484.
